

AELIA CREATOR COMMERCE PLATFORM

System Requirements & MVP Specification

A concise product and system requirements specification defining what the AELIA Creator Commerce Platform must deliver in its initial MVP and how it should evolve.

CREATE	COLLABORATE	COMMERCE	GROW
Empowering Creators	Connecting Brands	Driving Value	Building Opportunities

DOCUMENT	DETAILS
Version	1.0
Prepared by	Erick Wanga
For	Aelia Holdings Limited
Technology Partner	Codevertex Africa
Date	September 2026
Status	Product Requirements / Pre-Development

Marketing Objective → Creator Match → Campaign → Content → Commerce → Measurement → Relationship

PART 1 — PLATFORM OVERVIEW

1.1 Purpose

AELIA Creator Commerce is a technology-enabled marketplace connecting brands with creators for influence and content, while providing the tools required to match, collaborate, contract, pay, measure and build repeat commercial relationships.

Core Commercial Journey

Marketing Objective → Creator Match → Campaign → Content → Commerce → Measurement → Relationship

1.2 Platform Model

Component	Requirement
Influence Marketplace	Creators publish content to their own audiences on behalf of brands.
Content Marketplace	Creators produce content for brands, whether or not they publish it to their own audiences.
Brand Side	Brands discover creators, create campaigns, collaborate, manage content, fund campaigns and measure results.
Creator Side	Creators build professional profiles, discover opportunities, deliver campaigns, get paid and build commercial relationships.
AELIA Operations	Verification, matching support, campaign administration, payment monitoring, disputes, reporting and platform management.

1.3 Core Users

User	Primary Role
Brands	Create and manage creator campaigns.
Creators	Offer influence, content and creative services.
AELIA Administration	Manage platform operations and marketplace quality.
Finance / Administration	Monitor transactions and reconciliation.
Super Administrator	Manage system-level configuration.

1.4 Business Objectives

#	Objective
1	Connect brands with relevant creators.
2	Turn marketing objectives into structured creator campaigns.
3	Create professional commercial opportunities for creators.
4	Facilitate campaign collaboration and payment.
5	Measure campaign and commercial outcomes.
6	Build two-sided reputation and trust.
7	Enable repeat bookings and relationships.
8	Build creator-commerce data and intelligence.
9	Generate sustainable platform revenue.

PART 2 — CORE FUNCTIONAL REQUIREMENTS

Platform Module	What the System Must Do
User Registration & Verification	Register and verify Brands, Creators and authorized platform users.
Creator Passport	Capture creator identity, niche, skills, platforms, audience, performance, rates, packages, availability, usage rights and campaign history.
Brand Passport	Capture organization information, industry, location, verification, campaign history, payment reliability and commercial reputation.
Creator Discovery	Allow brands to search, filter, review and shortlist suitable creators.
Creator Matching	Recommend creators based on audience, niche, platform, geography, performance, budget, reliability, suitability and availability.
Campaign Creation	Allow brands to define objective, audience, platforms, deliverables, creators, budget, timeline, content requirements and rights.
Campaign Workspace	Manage briefs, creators, agreements, messages, deliverables, deadlines, content, approvals, payments and performance in one place.
Content Marketplace	Support both influence campaigns and UGC/content-production campaigns.
Content Submission	Allow creators to submit content, receive revisions and obtain approval.
Contracts & Rights	Record deliverables, fees, deadlines, revisions, cancellation, ownership, usage, geography, exclusivity and other agreed terms.
Communication	Enable campaign-related messaging and notifications.
Payments	Facilitate campaign funding, transaction tracking, creator payouts and reconciliation through an appropriate payment provider.
Performance Tracking	Track reach, views, engagement, clicks, leads, conversions and sales where technically measurable.
Reputation	Enable Brands to review Creators and Creators to review Brands.
Rebooking	Enable repeat bookings, saved creators, future invitations and ongoing relationships.
Reporting	Provide campaign, financial and performance reporting.
Administration	Manage verification, campaigns, transactions, disputes, users, analytics and platform configuration.

2.1 AELIA Match Principle

The platform recommends. The brand decides.

For the MVP, matching may be rules-based and supported by AELIA's human team. More advanced intelligence can be introduced after validation.

PART 3 — USER JOURNEYS & MVP SCOPE

3.1 Brand Journey		3.2 Creator Journey	
Stage	Activity	Stage	Activity
1	Register	1	Register
2	Verify	2	Verify
3	Create Campaign	3	Complete Creator Passport
4	Define Objective	4	Connect Socials
5	Match	5	Set Niche / Rates / Availability
6	Shortlist	6	Discover Opportunities
7	Select	7	Apply / Accept
8	Agree	8	Create
9	Fund	9	Submit
10	Collaborate	10	Revise
11	Review / Approve	11	Approve
12	Publish	12	Publish where required
13	Measure	13	Performance
14	Pay	14	Get Paid
15	Review	15	Review
16	Rebook	16	Rebook

3.3 MVP — MUST HAVE

Area	MVP Requirement
Brand	Registration, verification, campaign creation, creator discovery, shortlisting and selection
Creator	Registration, verification, Creator Passport, rates, availability and opportunities
Campaigns	Campaign brief, budget, timeline, deliverables and campaign workspace
Matching	Rules-based creator recommendations
Collaboration	Messaging, submissions, revisions and approvals
Contracts	Basic commercial terms and content rights
Payments	Funding, transaction records and creator payout through configured provider
Performance	Basic campaign reporting
Reputation	Brand and creator reviews
Rebooking	Repeat booking capability
Administration	Verification, campaign, payment and dispute management
Platform	Responsive web / PWA experience

3.4 NOT REQUIRED FOR INITIAL MVP

Future Capability	Timing
Native Android application	Later
Native iOS application	Later
Advanced AI-generated content	Later
Advanced predictive AI	Later
Full affiliate ecosystem	Later
Regional expansion	Later
Advanced automation	Later

PART 4 — TECHNICAL, DATA & TRUST REQUIREMENTS

Area	Requirement
Architecture	AELIA should own its application and platform data while integrating approved Codevertex shared services.
Frontend	Responsive web / PWA for MVP; architecture should remain mobile-ready.
Backend	Agreed AELIA / Codevertex architecture with documented services and responsibilities.
Database	AELIA-specific database and data model.
Authentication	Secure authentication and role-based access.
APIs	Complete documentation for all shared services and external integrations.
Payments	Use an appropriate licensed payment provider; AELIA should not assume it operates regulated payment/escrow services.
Social Integrations	Instagram, Facebook, TikTok, YouTube, LinkedIn or other platforms where APIs and permissions permit.
Security	Authentication, authorization, encryption, API security, audit logs, backups and monitoring.
Privacy	Consent, privacy information, retention, deletion, user access, processor management and breach response.
Data Model	Users, organizations, creators, brands, campaigns, deliverables, agreements, transactions, payouts, reviews, disputes and performance.
Notifications	Email, SMS, WhatsApp where available and in-platform notifications.
Analytics	Campaign, creator, brand, financial and platform performance data.

4.1 Critical Ownership & Access

Asset / Resource	Requirement
Domain & DNS	AELIA controlled
Source Code	AELIA access/control
Database	AELIA access/control
Analytics	AELIA access/control
Payment Accounts	Appropriate AELIA access
API Credentials	Controlled access
Cloud Environment	Controlled access
Documentation	AELIA access
Backups	AELIA access
App Store Accounts	AELIA controlled when applicable

Critical AELIA assets should not exist only inside Codevertex-controlled accounts.

Codevertex may administer agreed infrastructure, but AELIA must maintain appropriate ownership or controlled access.

4.2 API Documentation

API Documentation Requirement	Description
Purpose	What the API/service does
Endpoints	Available API endpoints
Authentication	How systems authenticate
Request Format	Required information sent to API
Response Format	Information returned
Error Codes	Possible errors
Rate Limits	Usage restrictions
Versioning	API version management
Sandbox / Test	Test environment
Production	Live environment
Monitoring	API/service monitoring
Dependencies	Required services
Ownership / Access	Who controls and accesses the API

PART 5 — PILOT, ACCEPTANCE & DECISIONS

5.1 Pilot Validation

Indicator	Target
Participating Brands	8–10
Participating Creators	15–20
Real Campaigns	At least 5
Paid End-to-End Transactions	At least 3
On-Time Delivery	90%+
Rebooking Intentions	At least 2
User Feedback	Collected and reviewed
Economic Validation	Campaign value, platform revenue, creator payout, payment costs and support costs

5.2 Definition of Done

BUILD → TEST → SECURITY CHECK → DOCUMENTATION → UAT → AELIA APPROVAL

Requirement	Completion Condition
Functionality	Works according to approved requirement
UI / UX	Relevant screens and workflow completed
Integration	Required APIs tested
Security	Access and permissions tested
Error Handling	Key failure scenarios tested
Documentation	Technical/user documentation updated
Analytics	Required events configured
UAT	User Acceptance Testing passed
Approval	Accepted by designated AELIA product owner

5.3 Key Decisions Before Development

#	Decision
1	Final legal structure and ownership model
2	Whether Creator Commerce operates within Aelia Holdings or through a dedicated entity / SPV
3	Payment provider and transaction architecture
4	Tax treatment and configurable withholding logic
5	Final Codevertex shared services and APIs to be reused
6	Data-controller / data-processor responsibilities
7	Commission and pricing model
8	MVP pilot brands and creators
9	Final Brand Agreement
10	Final Creator Agreement
11	Infrastructure, SLA, support and maintenance arrangements
12	Source-code, data, account and access arrangements

5.4 Next Technical Documents

Document	Purpose
Technical Architecture Specification	How the platform will be built
API Specification	How systems will communicate
Database / Data Model Specification	How platform data will be structured
UI/UX Design Specification	Screens, workflows and user experience
Security & Data Protection Specification	Security and privacy controls
Payment Integration Specification	Payment and transaction architecture
Test & UAT Plan	Testing and acceptance
Deployment & Support Runbook	Operations, maintenance and support

CORE MVP PRINCIPLE

Connect a real brand with a suitable creator, manage the campaign, facilitate payment, measure the outcome and create the basis for repeat business.

The MVP should therefore prioritize commercial validation, usability, trust, transaction integrity, campaign delivery, measurement and repeat business rather than attempting to deliver every planned future capability.
